

TRAINING INFORMATION SHEET / COURSE OVERVIEW

ADVANCED QTP/UFT**Course Overview**

Test Automation is the process of creating a computer script to automatically test software products that would otherwise need to be tested manually.

Once the basic QTP skills are mastered, it is time to move to the next level.

This course will provide you with the advanced QTP skills that you need to unlock the potential of test automation.

Learn to use the Expert view and VBScript to develop data driven, robust and efficient automation tests.

Course Objectives**By the end of this course you will be able to:**

- Identify when Expert View is useful
- Retrieve and use the properties of an object
- Create programmatic descriptions
- Create tests that include VBScript
- Retrieve data from application objects
- Use the Data Table object to store runtime data and drive actions
- Create scripts that access data from external sources
- Create new subroutines and functions
- Use the Function Library editor
- Identify when to handle exceptions programmatically.

Who Should Attend

- Test Automators

Duration: 2 days**Prerequisites**

- Working knowledge of Software Testing Concepts
- How to use QTP/UFT course (or equivalent)
- Programming Experience
